

A man and a woman, both wearing white lab coats, are in a laboratory setting. The man, on the right, is holding a tablet and looking at it intently. The woman, on the left, is wearing glasses and holding two small dark bottles, also looking at the tablet. The background shows shelves with various laboratory equipment and supplies.

MERIT SOLUTIONS | APPS AND INNOVATION

Merit Solutions specializes in delivering innovative mobile and web apps and that can be delivered on any platform or device. Transforming processes through integration via smart devices enables the transmission of data, machine learning and even artificial intelligence.

The Apps and Innovation Team

Merit Solutions is capable of complementing your system with additional functionalities on any platform and any device. Whether it's IoT, machine learning capabilities, efficiency-enabling apps applications, or combining the many services on Microsoft Azure, we've had experience enhancing customer experiences in many different ways.

A vast majority of organizations handle business processes with more than one solution. Even though powerful and versatile end-to-end systems like Microsoft Dynamics 365 exist, the reality is, some aspects of your business are going to go through 3rd party apps and add-ons.

Our Apps and Innovation team builds integrations which ensure your user experience is smoother, not more complex. We enable effortless connections between multiple systems, apps, platforms and sources of data. To tie everything together, we design user interfaces which are simple to use, but let you take complete control of complex business processes intuitively.

Merit Solutions' Apps and Innovations team operates in three major transformational steps.

Existing State Analysis and Consulting

Before even thinking about developing apps to complement and enhance your core business applications, we want to understand the current state of your business processes. We chart them using easily understandable workflows and look for inefficiencies, gaps, and ways to counter each problem. We capture customers' goals and try to envision how to achieve them with technology. We make suggestions based on our industry expertise and work on setting up an infrastructure which will give you better, more pertinent data.

Simplifying day-to-day processes

Once our customers decide on the path they want to take, we deliver the solution through incremental improvements. ROI starts with better user experience, which translates into simplifying day-to-day processes to consume less time and resources. We design mobile apps capable of handling tasks integral to Life Science organizations. Our solutions add even more granular control and refinement to whatever system you decide to use.

The complex architecture behind all of this is always invisible to the end user – it's our job to ensure that remains the case. All that is left is an interface which is easy to take in, straightforward to work with, and lets your employees focus on their work.

Integrations

Everything we build is compatible with every other part of your system. Data from our solutions seamlessly rolls back into Microsoft Dynamics 365 and Power BI, allowing you to tailor your experience any way you want to and extract crucial nuggets of data pertinent to your decision-making processes.

We are heavily focused on creating sustainable integrations. This means your IT department will be able to take care of the solution on its own.

The most important thing you can do to future-proof your organization is let your team focus on their work. It's our job to do the rest, creating value and efficiency across previously disconnected platforms and devices.
